

Partnering with Nepture Research Institute (NRI), Canusa now holds the key to your bore pipe needs. A pre impregnated glass that is moisture cured will protect any and all ARO joint coating during the bore process. This material requires no blasting, no waiting for cure out on two part epoxy, and no material waste. Apply surface prep; apply Corrosion Coating, Apply XL outer wrap, Done! Please call for a list of companies that are currently using this new innovative method.
